SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA SUBUNIT. TH
SUBUNIT IS COMPOSED OF AN HEAVY AND A LIGHT CHAIN LINKE.
DISULFIDE BOND. ALPHA-5 ASSOCIATES WITH BETA-1.
SUBCELLULAR LOCATION: Type I membrane protein.
SIMILARITY: BELONGS TO THE INTEGRIN ALPHA CHAIN FAMILY.
SIMILARITY: Contains 7 FG-GAP repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Repeat.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    C;Keywords: heterotetramer; immunoglobulin
F;15-98/Domain: immunoglobulin homology <II</pre>
A; Description: Mechanisms that generate human immunoglobulin diversity of A; Reference number: $31585
A; Accession: $31595
A; Status: preliminary
A; Molecule type: mRNA
A; Residues: 1-128 cCUI>
A; Cross-references: EMBL:Z14171; NID:g31007; PIDN:CAA78540.1; PID:g31008
C; Superfamily: immunoglobulin V region; immunoglobulin homology
C; Keywords: heterotetramer; immunoglobulin
